What urban local government deals with today

The same four problems, in every corporation and pourashava we have surveyed

Citizens must come in person

A holding tax payment or a trade licence renewal means a trip to the office, a queue, and often a middleman.

Revenue leaks quietly

Cash at the counter, paper receipts, and ledgers held per department. Nobody can see the true demand or the true collection.

Nothing is traceable

A file moves desk to desk with no record of who held it or for how long. Complaints cannot be answered with facts.

Departments do not share data

The same citizen and the same holding are re-entered in every section, so no number ever reconciles.

What Shohor is

One governed system behind every counter

For the citizen

Apply for any service from a phone, in Bangla

Pay online — ShurjoPay or SSLCommerz

Track the application without visiting

Receive the certificate digitally

For the corporation

One citizen and holding record across all departments

Digital revenue, reconciled to the bank account

Every approval attributed, dated and auditable

Ward-wise demand and collection in real time

54 modules, eight groups

One database, one citizen login — deploy the groups a corporation is ready for

Platform

How one service runs, end to end

Holding tax, a trade licence, a birth certificate — the same governed path

Every step attributed, dated and auditable — a complaint can be answered with facts

Built and proven with Rajshahi City Corporation

Not a prototype — a live deployment, now generalised for any corporation or pourashava

1 day

to re-brand for a new client

The system was written for one corporation, then deliberately un-written from it. Organisation name, logo, district, bank details, payment gateway and branding are now configuration, not code — so a second city deploys without a fork.

How a corporation or pourashava adopts it

Dedicated instance per client — your data stays yours

Your own instance

A separate deployment and database per client. No shared tenancy, no other city's data in your system.

Configured, not rebuilt

Name, logo, wards, fee rules, bank account and gateway are set per deployment.

Cloud or your data centre

Approved government cloud, your own racks, or hybrid — whichever your policy requires.

Start with one service

Pick the service that hurts most — usually holding tax — prove it, then widen.

Shohor is part of Tiger One

One enterprise platform. Specialist modules where the work happens

Tiger One

Enterprise platform

Projects, contracts, budgets, assets, personnel and GIS in one governed environment.

Naya

Meetings & decisions

Official activity becomes an accountable institutional record.

Sky Hawk

Field & project monitoring

A claim of progress becomes verified, geotagged delivery evidence.

Shohor

Citizen services

Every corporation and pourashava service — applied for, paid, approved and on the record.

Start with one service that matters.

We map your current process, configure the modules you are ready for, migrate a ward of real data, and run a governed pilot with measurable collection targets.
